Fermilab campus master plan

Since 1967, Fermilab has worked to answer fundamental questions to enhance our understanding of everything we see.

However, much has changed in the world of basic science research since 1967. The system of national laboratories, made up of the places where answers are researched, is undergoing a transition.

Fermilab campus master plan

The postwar laboratory model, expressed in scattered, dark and narrow bunker-like places, is giving way to open and transparent international centers for generating and sharing knowledge.

Fermilab campus master plan

The Fermilab Campus Master Plan is a transformative plan creating an open, inviting and collaborative international research community

Charting a path for the transition

- Establishes the framework and the key elements of the Fermilab campus
- Reflects a vision for future development
- Synthesizes the collective goals and aspirations for the laboratory
- Giving them form and organization
- Defines a realistic plan for implementation.

Part one introduction

Background

- The Campus, What people value most, history

Campus Geography

- Accelerator, developed areas, habitat, ecology. regions

Planning Context

- Introduction
- Guiding Principles
- Strategic Plan Themes
- Self Critique: Current perspective on the campus
- Campus Infrastructure
- Vision

Guiding Principles

- Support cutting edge research
- Enhance the campus experience
- Reinforce community
- Ensure the campus is welcoming and informative to local and international visitors
- Promote stewardship
- Ensure integrative planning and design
- Uphold the unique character of Fermilab

Part two campus plan

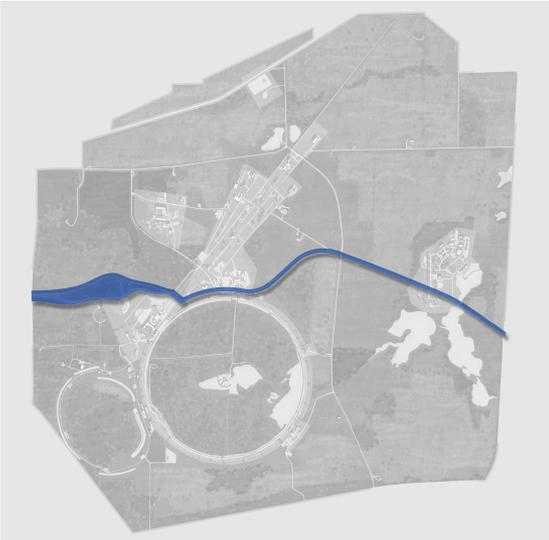

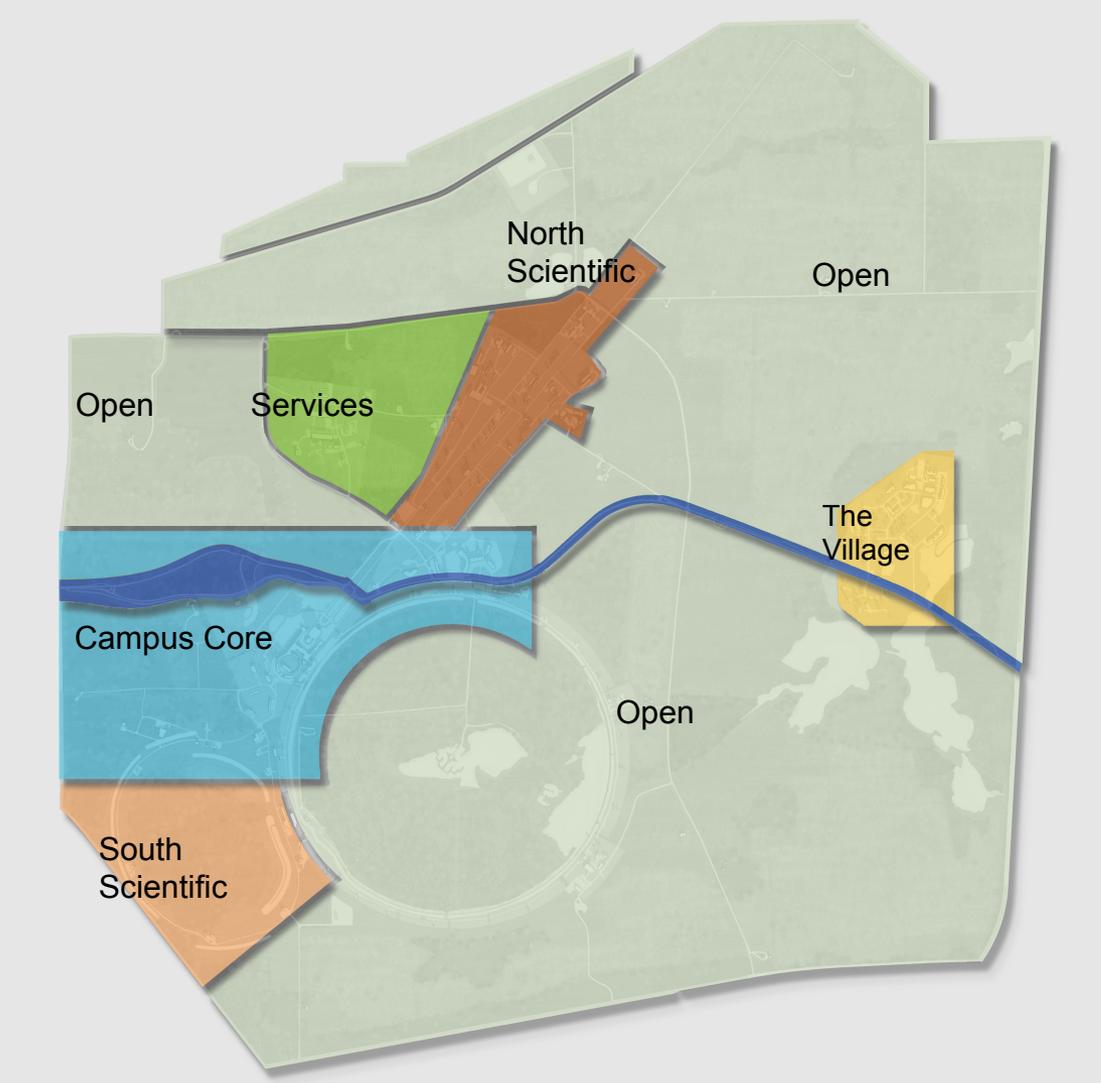

Organizing the Campus

- Consolidate and centralize
- Create planning regions
- Define core campus districts

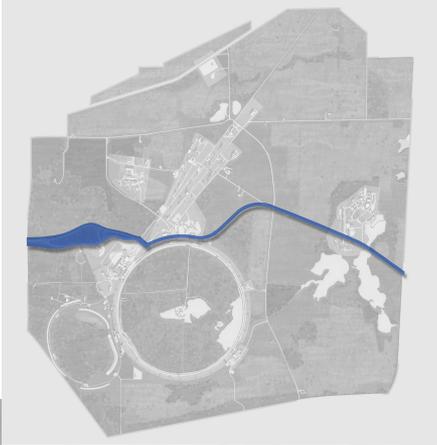

Designing the Campus

- Establish design guidelines
- Strengthen campus landscapes
- Integrate sustainability
- Improve mobility and wayfinding

Organizing the campus

Your thoughts

Part three development plan

Highlights

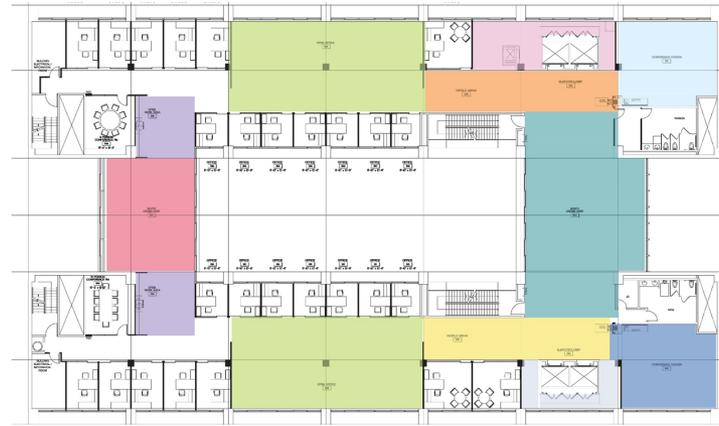

- **Integrated Engineering Research Center**
- **Wilson Hall 2.0**
- **Scientific Hostel**
- **Entrance gateway**

Integrated Engineering Research Center

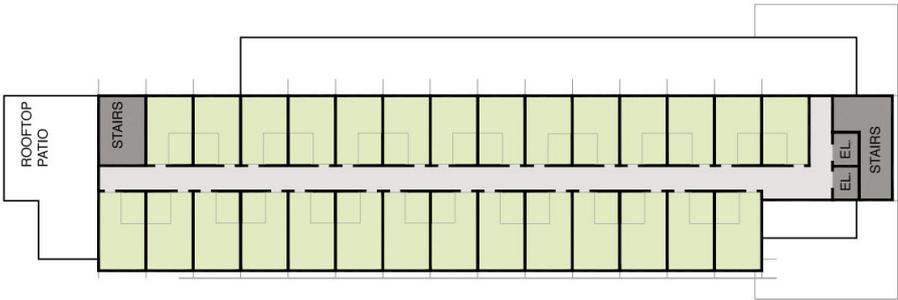

Bringing people together is a vital feature of a collaborative international research community

Wilson Hall 2.0

Workplace design is more important than ever before. A fundamental shift has occurred in the ways we work. Younger generations and recent graduates expect multiple possible types of workspaces, including ones that are more casual and open than the office or the cubicle

Scientific Hostel

Entrance Gateway
